Build-ready, data-backed operator brief

Prepared by **Mercan Group** — an experienced immigration-by-investment advisor. Greece grants a **renewable 5-year residence permit** for a qualifying real-estate investment, with Schengen travel. Landing page:

www.mercan.com/lp/greece-golden-visa

Data provenance. All search-volume and CPC figures were pulled from **Google Keyword Planner via the Google Ads API (v23)** (KeywordPlanIdeaService.GenerateKeywordHistoricalMetrics) for geographies **Oman** and **Jordan**, languages **English** and **Arabic**, network **Google Search**, over the **last 12 months**. Keyword Planner reports volume as rounded ranges (10 / 20 / 30...), not exact counts — treat every figure as **directional sizing, not a guarantee** of clicks or conversions. Terms marked <10 fall below Keyword Planner's ~10 searches/month reporting floor: that is genuinely how much search there is. These are small, high-value niche markets.

1 Executive summary

There is real, capturable demand in Oman and Jordan for an **EU residence-by-investment — a foothold in Europe with Schengen mobility and a stable family base** — two under-served Gulf and Levant markets with high per-capita wealth and strong mobility motives. This campaign puts Mercan's Greece Golden Visa in front of that audience on Google Search, in both English and Arabic. The program is **residency, not citizenship** — a renewable 5-year Greek residence permit earned through a qualifying real-estate investment.

The honest reality, stated up front

- **Total addressable demand is roughly 1,080 searches/month** across every keyword researched, both countries, both languages (deduplicated). That is a small, premium niche — not a high-volume market.
- **Greece-named terms carry real, measurable demand — a genuine advantage.** Unlike thinner destination programs, terms like *golden visa greece / greek golden visa* return **real volume (10–20/mo)** and **even CPC bid data** in these markets — Greece has authentic brand-search demand. Whoever types them is already considering Greece.
- **The strategy splits reach from intent.** Broad head terms (*golden visa, residency by investment, eu golden visa*, and the Arabic الفيزا الذهبية / الإقامة الذهبية) carry the **reach**; Greece-named + property terms carry the **intent**. Bid to capture both.
- **English leads.** Investment-migration is a globalised, English-jargon category; even Arabic-speaking Gulf/Levant investors (and their bankers and advisors) overwhelmingly search the industry terms in English. Arabic is real and often cheaper, but broader and earlier-funnel.
- **The lever is a genuine rising-cost reality — not citizenship.** Greece's real-estate thresholds have already been raised and tiered (€250K conversion projects · €400K most of Greece · €800K prime zones). The honest hook is “act while the lower-entry routes remain,” framed as a residence permit — never as a passport or citizenship.

Market shape at a glance

830

ENGLISH / MO

Where ready-to-invest intent + reach concentrate

250

ARABIC / MO

Real, broader/earlier demand; often cheaper CPCs

510

OMAN / MO

Near-even with Jordan

570

JORDAN / MO

Slightly heavier; strong EU-base motive

~1,080

TOTAL / MO

Full addressable market, both langs, both countries

BOTTOM LINE

This is a **precision, high-value-per-lead** campaign, not a volume play. Success is measured in **cost-per-qualified-lead**, not clicks or impressions.

2 Recommendations

2.1 Campaign structure

SETTING	RECOMMENDATION	WHY
Channel	Search only	Precision audience on a small budget
Search Partners	OFF	Dilutes a narrow HNW audience; revisit once data is clean
Display Network	OFF	No display for a precision search test
Campaigns (target design)	An English campaign + a parallel Arabic campaign — but at the launch budget, consolidate to one English-first campaign (see §3)	Clean per-language budget control + native ad copy + clean CPL read <i>once budget supports it</i>
Geo targeting	Oman + Jordan , location option “ Presence: people in your targeted locations ” (NOT presence-or-interest)	We want people physically in Oman/Jordan, not everyone worldwide merely interested
Language targeting	English on EN campaign, Arabic on AR campaign — but Google keys language off the user's browser/interface, not the query. The real split is enforced by the keyword list	Do not rely on language targeting alone to separate the two
Devices	Start all devices; monitor mobile vs desktop	HNW research often starts on mobile, converts on desktop/phone-call — don't cut mobile early
Ad schedule	All-week to start; review hour/day after 2 weeks	Let data decide, not assumptions

2.2 Ad groups — six, mirroring the six keyword clusters

Each campaign is organised into **6 tightly-themed ad groups**, one per intent cluster, so every ad speaks to exactly the searcher's mindset. Because Greece is a **real-estate-driven residency**, the Greece-named and property clusters (AG1 / AG3 / AG5) carry the sharpest intent — bid up, use [exact], write the sharpest ads there.

AD GROUP	CLUSTER	PRIORITY	NOTE
AG1 · Greece Golden Visa	A	Highest intent	Greece-named head terms — real volume + CPC data; bid up , [exact]
AG2 · Residency by Investment	B	High reach	The precise category label; research→ready bridge
AG3 · Property / Real-estate Visa	C	Highest intent	The program mechanism: buy property → residency. Sharp, ready buyers
AG4 · EU Residency / Schengen	D	High emotion	Residency-accurate only — “EU foothold + Schengen travel,” <i>never</i> second passport or citizenship
AG5 · Investment Migration / Investor Visa	E	High intent	Greece-named investor-visa terms; ready-to-move-money searchers
AG6 · Comparison / Best-Cheapest-Fastest	F	Commercial shopper	Lead with tiered entry (€250K route), Schengen access, EU residency

AG4 ACCURACY NOTE — RESIDENCY, NOT CITIZENSHIP

The Greece Golden Visa is a **renewable residence permit**, **not** citizenship and **not** a second passport. Greek citizenship is a separate naturalisation route (typically ~7 years of residence). All AG4 copy frames the benefit as “EU residency with visa-free Schengen travel” — the Arabic states it plainly as (تصريح إقامة وليس جنسية) (“a residence permit, not citizenship”).

2.3 Bidding

- **Start on Maximize Conversions** on both campaigns — **no target CPA yet**. A brand-new campaign has zero conversion history to feed a target, so tCPA would starve delivery.

- **Primary conversion action:** the LP's main lead event (consultation request / guide download / tap-to-call). Confirm the Greece landing page fires **its own distinct lead conversion** into Google Ads — ideally through the existing GTM container (GTM-K6864NBH) with **Enhanced Conversions** on — so this campaign optimises on *its own* leads, not blended Mercan activity.
- **Graduate to tCPA after ~15–30 conversions**, once a real cost-per-lead is known.
- **AG1 / AG3 / AG5 (Greece-named):** bias bids **up** — these are the readiest buyers and they carry real volume + CPC data. Cap the broad *golden visa* head (Oman high-top-of-page hits **\$11.90**) so it doesn't drain the budget.

2.4 Negative keywords (protect a narrow budget)

Apply a shared negative list at **campaign level** on both campaigns to strip adjacent-but-worthless traffic that never invests six figures — Greece especially needs a strong *holiday/tourism* block:

Jobs / work — jobs, vacancy, hiring, salary, work visa, work permit · وظائف، عمل، تأشيرة عمل، راتب

Study — student, study in greece, scholarship, university, erasmus · دراسة، منحة

Free / humanitarian — free, grant, asylum, refugee, embassy appointment · مجاني، لجوء، لاجئ،

Stray — map, weather, greek language course, translation · ترجمة

Tourism / holiday — santorini, mykonos, greek islands tour, greece holiday, greece vacation, hotel booking, flights · سياحة، فندق، سانتوريني، ميكونوس

Rent / lifestyle — rent, apartment for rent, cost of living, cheap living, digital nomad · إيجار، تكلفة المعيشة، رخيص للسكن ·

Citizenship mismatch — greek citizenship, greek passport, greece citizenship by descent (the GV is residency — these mislead)

ONGOING HYGIENE

Run the **Search Terms report twice weekly** for the first month and harvest negatives aggressively — a small budget cannot absorb waste. Watch for holiday/tourism spillover (Greece is a top holiday destination) and other-country golden-visa searches: decide per term whether to exclude or redirect into AG6 (comparison).

2.5 The rising-cost lever (real — not a fabricated deadline)

Tiered thresholds — €250K conversion · €400K standard · €800K prime zones

Greece has **already raised and tiered** its real-estate thresholds. The honest angle is “the lower-entry routes are narrowing — act while they remain,” framed as a residence permit. **No specific future date is asserted.**

- **Sitelink (EN):** “Secure the €250K Conversion Route” → deep-link to the LP consultation
- **Sitelink (AR):** قبل ارتفاع تكاليف الإقامة (“before residency costs rise”)
- **Callout:** “EU residency + Schengen travel” / “Renewable 5-year permit” — never “passport” or “citizenship”

3 Budget plan — \$30/day (a beachhead, not a scale budget)

THE RECOMMENDATION

At \$30/day, run **English-first across BOTH countries as a single campaign** to gather signal. **Do not fragment into four cells.** This is a deliberate departure from the strategy document's day-one 70/30 two-campaign split — that parallel-Arabic structure is right *once budget reaches roughly \$75–150/day*. At \$30/day it spreads spend too thin to learn.

3.1 What \$30/day buys (one English-first campaign, both countries)

This is a **premium-CPC category** — golden-visa clicks are among the most expensive in paid search. Actual CPC paid usually sits below the top-of-page bid, so we model an effective-CPC band:

EFFECTIVE CPC	SCENARIO	CLICKS/DAY AT FULL \$30	CLICKS/MONTH (~30D)
\$2.50	Optimistic — Jordan / Arabic-leaning, cheaper clicks	12.0	~360
\$4.00	Mid — blended English	7.5	~225
\$6.00	Conservative — premium English, Oman-weighted	5.0	~150

→ Roughly **150–360 clicks/month**. Modest by design — enough to read direction and cost-per-lead, not to chase scale.

3.2 Why NOT split into four cells

Splitting \$30/day across four cells — EN-Oman, EN-Jordan, AR-Oman, AR-Jordan — leaves **\$7.50/day each**:

PER-CELL BUDGET	@ \$6 CPC	@ \$4 CPC
\$7.50/day	1.2 clicks/day	1.9 clicks/day

DON'T SPLIT FOUR WAYS

That is **below the ~2 clicks/day floor** a Maximize-Conversions campaign needs to exit the learning phase. Splitting starves every cell — four campaigns that each learn nothing beats one campaign that learns. Consolidate now; layer Arabic and per-country geo splits only when budget scales.

3.3 Scaled scenarios (when to graduate)

DAILY BUDGET	SPLIT	EFF. CPC	CLICKS/DAY	CLICKS/MO	MILESTONE
\$30	EN-first, one campaign, both countries	\$4.00	~7.5	~225	Beachhead — prove CPL & direction
\$75	EN \$52 + AR \$23	\$4.00	~19	~560	Split Arabic into its own campaign
\$150	EN \$105 + AR \$45	\$4.00	~38	~1,125	Volume to graduate to tCPA + consider per-country geo splits

READ THIS AS A BEACHHEAD · ENGLISH-FIRST RECOMMENDATION

\$30/day answers “*what does a qualified Greece Golden Visa lead cost in these markets, and does English or Arabic convert cheaper?*” — not to deliver volume. **Launch English-first across both countries**, measure CPL, then scale and split per the milestones above. Make the scale-up decision around **day ~21**, judged on **cost-per-qualified-lead**, not click count.

4 Totals & the CPC reality

4.1 Total addressable volume (deduplicated — each unique keyword counted once)

	ENGLISH	ARABIC	TOTAL
Oman	400	110	510
Jordan	430	140	570
Total	830	250	1,080 / mo

The market is **English-weighted (830 vs 250)** and **near-even between the two countries (510 Oman / 570 Jordan, Jordan slightly heavier)**. Exactly why the plan is English-first, both-countries, with Arabic layered in as budget scales.

4.2 The CPC reality

This is a **premium-CPC category**. **6 keywords** returned bid data (the volume-bearing head + Greece-named terms) — a healthier signal than thinner programs where only the generic head term bids. Everything else has too little volume for Keyword Planner to report a bid:

BID TIER	RANGE (USD)	AVERAGE
Low top-of-page	\$0.04 – \$0.92	\$0.49
High top-of-page	\$0.62 – \$11.90	\$3.73

golden visa in **Oman** peaks at **\$11.90** high-top-of-page — the single most expensive click in the set. **Jordan CPCs are materially cheaper** (\$0.32–\$2.11), one reason Arabic/Jordan-leaning traffic tends to be the cheaper click and worth testing as budget grows. The Greece-named *golden visa greece / greek golden visa* bid at \$0.63–\$5.02 — real, and a sign of authentic Greece-specific demand.

CLOSING NOTE

Every figure here is a Keyword Planner range — directional sizing, not a conversion guarantee. The real decisions — how much to scale, and whether English or Arabic converts cheaper — should be driven by the **actual cost-per-qualified-lead** observed in the first **2–3 weeks**, not by these pre-launch estimates.

5 All 111 researched keywords — full traffic table

Every researched keyword (68 English + 43 Arabic), **sorted highest-volume first**. Oman / Jordan columns show Keyword Planner's rounded monthly ranges; <10 means below the ~10 searches/month reporting floor. Arabic rows are shown right-to-left with transliteration and English gloss beneath. The 6 keywords that returned bid data are shown with **highlighted CPC** ; Greece-named money-terms are **GREECE** -badged and shaded.

Legend: EN English · AR Arabic Low Med High competition Greece money-term row \$0.00 = real CPC bid data

Prepared by Mercan Group — experienced immigration-by-investment advisor. The Greece Golden Visa is a **renewable 5-year residence permit** earned through a qualifying real-estate investment (residency, not citizenship). This is a precision, high-value-per-lead campaign; success is measured in cost-per-qualified-lead, not clicks or impressions.
