Panama QIP / QIV — the “Panama Golden Visa”	Oman & Jordan	
Channel	Languages	Date
Google Search (Search Partners off)	English + Arabic	2026-07-06
Status		
Build-ready, data-backed operator brief		

Prepared by **Mercan Group** — the only company worldwide with an official Government-of-Panama partnership for the Qualified Investor Program. Landing page: www.mercan.com/lp/panama-qualified-investor-program

Data provenance. All search-volume and CPC figures were pulled from **Google Keyword Planner via the Google Ads API (v23)** (KeywordPlanIdeaService.GenerateKeywordHistoricalMetrics) for geographies **Oman** and **Jordan**, languages **English** and **Arabic**, network **Google Search**, over the **last 12 months**. Keyword Planner reports volume as rounded ranges (10 / 20 / 30...), not exact counts — treat every figure as **directional sizing, not a guarantee** of clicks or conversions. Terms marked <10 fall below Keyword Planner’s ~10 searches/month reporting floor: that is genuinely how much search there is. These are small, high-value niche markets.

1 Executive summary

There is real, capturable demand in Oman and Jordan for a **second residency / second passport / family “Plan B”** — two underserved Gulf and Levant markets with high per-capita wealth, strong mobility motives, and (for Jordan especially) an active search for a stronger passport and a stable, dollar-based base. This campaign puts Mercan’s Panama QIP in front of that audience on Google Search, in both English and Arabic.

The honest reality, stated up front

- **Total addressable demand is roughly 950 searches/month** across every keyword researched, both countries, both languages (deduplicated). That is a small, premium niche — not a high-volume market.
- **Panama-specific terms are near-zero volume.** Almost every “panama golden visa / برنامج المستثمر المؤهل” style term returns <10 here — very few people in Oman/Jordan search for *Panama* by name yet. Expected, not an error.
- **The strategy splits reach from intent.** Broad head terms (*golden visa, residency by investment, citizenship by investment*, and the Arabic الإقامة الذهبية / الفيزا الذهبية) carry the **reach**; Panama-specific terms carry the **intent** (whoever types them is already sold on Panama). Bid to capture both.
- **English leads.** Investment-migration is a globalised, English-jargon category; even Arabic-speaking Gulf/Levant investors (and their bankers and advisors) overwhelmingly search the industry terms in English. Arabic is real and often cheaper, but broader and earlier-funnel.
- **The strongest CTA lever is a real deadline.** Panama’s real-estate threshold is scheduled to rise from **USD 300,000 to USD 500,000 in October 2026** — a legitimate “act before the price rises, save \$200K” hook that should headline sitelinks and callouts while live.

Market shape at a glance

680

ENGLISH / MO

Where ready-to-invest intent + reach concentrate

270

ARABIC / MO

Real, broader/earlier demand; often cheaper CPCs

460

OMAN / MO

Near-even with Jordan

490

JORDAN / MO

Near-even; strong Plan-B motive

~950

TOTAL / MO

Full addressable market, both langs, both countries

BOTTOM LINE

This is a **precision, high-value-per-lead** campaign, not a volume play. Success is measured in **cost-per-qualified-lead**, not clicks or impressions.

2 Recommendations

2.1 Campaign structure

SETTING	RECOMMENDATION	WHY
Channel	Search only	Precision audience on a small budget
Search Partners	OFF	Dilutes a narrow HNW audience; revisit once data is clean
Display Network	OFF	No display for a precision search test
Campaigns (target design)	An English campaign + a parallel Arabic campaign — but at the launch budget, consolidate to one English-first campaign (see §3)	Clean per-language budget control + native ad copy + clean CPL read <i>once budget supports it</i>
Geo targeting	Oman + Jordan , location option “ Presence: people in your targeted locations ” (NOT presence-or-interest)	We want people physically in Oman/Jordan, not everyone worldwide merely interested
Language targeting	English on EN campaign, Arabic on AR campaign — but Google keys language off the user’s browser/interface, not the query. The real split is enforced by the keyword list	Do not rely on language targeting alone to separate the two
Devices	Start all devices; monitor mobile vs desktop	HNW research often starts on mobile, converts on desktop/phone-call — don’t cut mobile early
Ad schedule	All-week to start; review hour/day after 2 weeks	Let data decide, not assumptions

2.2 Ad groups — six, mirroring the six keyword clusters

Each campaign is organised into **6 tightly-themed ad groups**, one per intent cluster, so every ad speaks to exactly the searcher’s mindset.

AD GROUP	CLUSTER	PRIORITY	NOTE
AG1 · Golden / Investor Visa	A	High reach	Category entry point; broadest head terms (<i>golden visa</i>)
AG2 · Residency by Investment	B	High reach	The precise category label; research→ready bridge
AG3 · Citizenship / 2nd Passport	C	High emotion	Honest copy only — Panama is residency now → citizenship eligibility after 5 yrs, never instant
AG4 · Panama-specific	D	Highest intent	Lowest volume, readiest buyers — bid up , [exact], sharpest ads
AG5 · Tax / Plan-B / Base	E	Research	Softer CTA; feeds remarketing later
AG6 · Comparison / Best-Cheapest-Fastest	F	Commercial shopper	Lead with \$300K + 30-day speed + 142-country access

AG3 HONESTY NOTE

Panama is a **residency** → **citizenship-after-5-years** route, **not** instant citizenship. All AG3 ad copy must frame it as “permanent residency now, a clear path to citizenship after 5 years.”

2.3 Bidding

- **Start on Maximize Conversions** on both campaigns — **no target CPA yet**. A brand-new campaign has zero conversion history to feed a target, so tCPA would starve delivery.
- **Primary conversion action:** the LP’s main lead event (consultation request / guide download / tap-to-call). Confirm the QIP landing page fires **its own distinct lead conversion** into Google Ads — ideally through the existing GTM container (GTM-K6864NBH) with **Enhanced Conversions** on — so this campaign optimises on *its own* leads, not blended Mercan activity.
- **Graduate to tCPA after ~15–30 conversions**, once a real cost-per-lead is known.
- **AG4 (Panama-specific):** bias bids **up** — readiest buyers at the lowest volume, so aggressive bids on tiny traffic are affordable.

2.4 Negative keywords (protect a narrow budget)

Apply a shared negative list at **campaign level** on both campaigns to strip adjacent-but-worthless traffic that never invests USD 300K. Summarised (full EN + AR sets held in the strategy file):

Jobs / work — jobs, vacancy, hiring, salary, work visa, work permit · وظائف، عمل، تأشيرة عمل، راتب

Study — student, study, scholarship, university, school · دراسة، منحة

Cheap-relocation — cost of living, rent, cheap living, budget, digital nomad · تكلفة المعيشة، إيجار، رخيص للسكن

Stray — map, weather, spanish course, translation · ترجمة

Tourism / travel — tourist, vacation, hotel booking, flights, airbnb · سياحة، فندق، طيران

Retire / lifestyle — retire, retirement, retiree, pensionado

Free / humanitarian — free, grant, asylum, refugee, embassy appointment · مجاني، لجوء، لاجئ

ONGOING HYGIENE

Run the **Search Terms report twice weekly** for the first month and harvest negatives aggressively — a small budget cannot absorb waste. Watch for other-country golden-visa searches: decide per term whether to exclude or redirect into AG6 (comparison).

2.5 The October-2026 urgency lever

USD 300K → USD 500K threshold rise — October 2026 · the single strongest CTA

Deploy while live; retire if the deadline moves.

- **Sitelink (EN):** “Before the Oct 2026 Threshold Rise” → deep-link to the LP consultation
- **Sitelink (AR):** قبل ارتفاع الحد الأدنى (“before the minimum rises”)
- **Callout:** “Invest at USD 300K — before it rises” / “Save \$200K vs the 2026 increase”

3 Budget plan — \$30/day (a beachhead, not a scale budget)

THE RECOMMENDATION

At \$30/day, run **English-first across BOTH countries as a single campaign** to gather signal. **Do not fragment into four cells.** This is a deliberate departure from the strategy document's day-one 70/30 two-campaign split — that parallel-Arabic structure is right *once budget reaches roughly \$75–150/day*. At \$30/day it spreads spend too thin to learn.

3.1 What \$30/day buys (one English-first campaign, both countries)

This is a **premium-CPC category** — golden-visa / citizenship-by-investment clicks are among the most expensive in paid search. Actual CPC paid usually sits below the top-of-page bid, so we model an effective-CPC band:

EFFECTIVE CPC	SCENARIO	CLICKS/DAY AT FULL \$30	CLICKS/MONTH (~30D)
\$2.50	Optimistic — Jordan / Arabic-leaning, cheaper clicks	12.0	~360
\$4.00	Mid — blended English	7.5	~225
\$6.00	Conservative — premium English, Oman-weighted	5.0	~150

→ Roughly **150–360 clicks/month**. Modest by design — enough to read direction and cost-per-lead, not to chase scale.

3.2 Why NOT split into four cells

Splitting \$30/day across four cells — EN-Oman, EN-Jordan, AR-Oman, AR-Jordan — leaves **\$7.50/day each**:

PER-CELL BUDGET	@ \$6 CPC	@ \$4 CPC
\$7.50/day	1.2 clicks/day	1.9 clicks/day

DON'T SPLIT FOUR WAYS

That is **below the ~2 clicks/day floor** a Maximize-Conversions campaign needs to exit the learning phase. Splitting starves every cell — four campaigns that each learn nothing beats one campaign that learns. Consolidate now; layer Arabic and per-country geo splits only when budget scales.

3.3 Scaled scenarios (when to graduate)

DAILY BUDGET	SPLIT	EFF. CPC	CLICKS/DAY	CLICKS/MO	MILESTONE
\$30	EN-first, one campaign, both countries	\$4.00	~7.5	~225	Beachhead — prove CPL & direction
\$75	EN \$52 + AR \$23	\$4.00	~19	~560	Split Arabic into its own campaign
\$150	EN \$105 + AR \$45	\$4.00	~38	~1,125	Volume to graduate to tCPA + consider per-country geo splits

READ THIS AS A BEACHHEAD · ENGLISH-FIRST RECOMMENDATION

\$30/day answers “*what does a qualified Panama-QIP lead cost in these markets, and does English or Arabic convert cheaper?*” — not to deliver volume. **Launch English-first across both countries**, measure CPL, then scale and split per the milestones above. Make the scale-up decision around **day ~21**, judged on **cost-per-qualified-lead**, not click count.

4 Totals & the CPC reality

4.1 Total addressable volume (deduplicated — each unique keyword counted once)

	ENGLISH	ARABIC	TOTAL
Oman	330	130	460
Jordan	350	140	490
Total	680	270	950 / mo

The market is **English-weighted (680 vs 270)** and **near-even between the two countries (460 Oman / 490 Jordan)**. Exactly why the plan is English-first, both-countries, with Arabic layered in as budget scales.

4.2 The CPC reality

This is a **premium-CPC category**. Only **4 keywords** returned bid data (the volume-bearing head terms) — everything else has too little volume for Keyword Planner to report a bid:

BID TIER	RANGE (USD)	AVERAGE
Low top-of-page	\$0.28 – \$1.19	\$0.61
High top-of-page	\$1.49 – \$11.90	\$5.13

golden visa in **Oman** peaks at **\$11.90** high-top-of-page — the single most expensive click in the set. **Jordan CPCs are materially cheaper** (\$0.32–\$2.11), one reason Arabic/Jordan-leaning traffic tends to be the cheaper click and worth testing as budget grows.

CLOSING NOTE

Every figure here is a Keyword Planner range — directional sizing, not a conversion guarantee. The real decisions — how much to scale, and whether English or Arabic converts cheaper — should be driven by the **actual cost-per-qualified-lead** observed in the first **2–3 weeks**, not by these pre-launch estimates.

5 All 121 researched keywords — full traffic table

Every researched keyword (73 English + 48 Arabic), **sorted highest-volume first**. Oman / Jordan columns show Keyword Planner's rounded monthly ranges; <10 means below the ~10 searches/month reporting floor. Arabic rows are shown right-to-left with transliteration and English gloss beneath. Only the four volume-bearing head terms (**highlighted CPC**) returned bid data; Panama money-terms are **PANAMA**-badged and shaded.

Legend: EN English · AR Arabic Low Med High competition PANAMA Panama money-term row \$0.00 = real CPC bid data
